● MultipleUploadMigrations

The screenshot shows a Visual Studio Code editor with a project named 'suci_jawan'. The Explorer panel on the left shows the file structure, with the 'migrations' folder expanded. The file '2025_11_28_070532_create_multiple_uploads_table.php' is selected. The main editor displays the content of this file, which is a Laravel migration. The code includes the following:

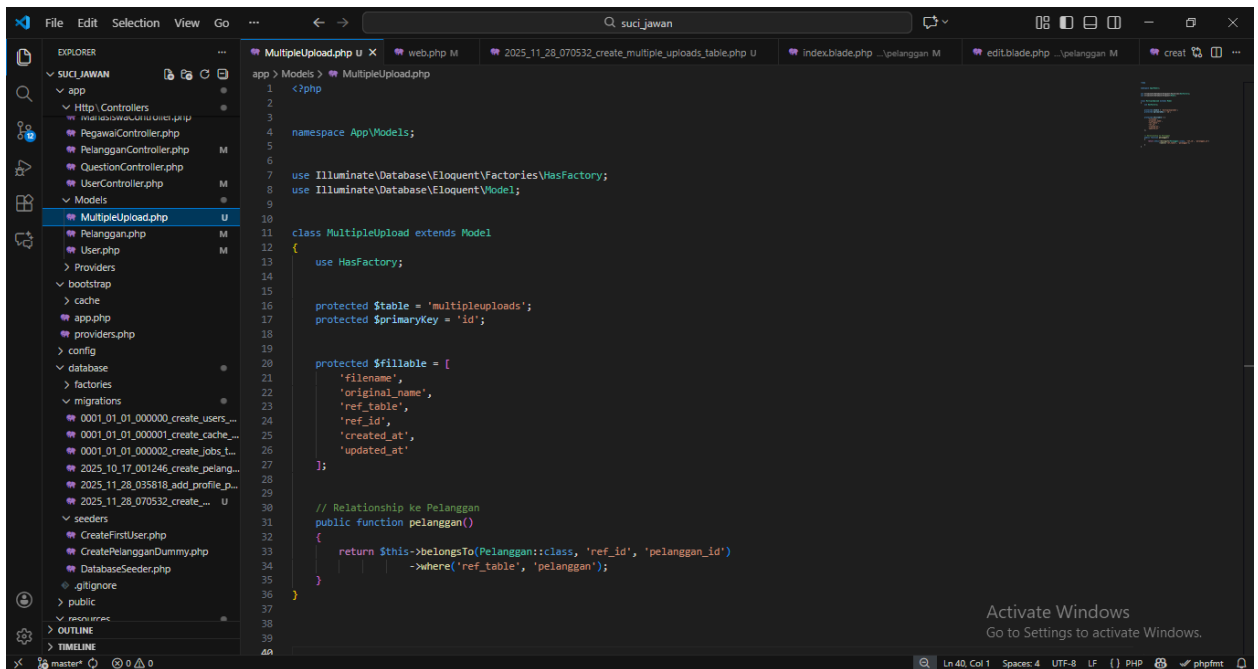

```
<?php
use Illuminate\Database\Migrations\Migration;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Support\Facades\Schema;

return new class extends Migration
{
    public function up()
    {
        Schema::create('multipleuploads', function (Blueprint $table) {
            $table->id();
            $table->string('filename');
            $table->string('original_name');
            $table->string('ref_table', 100);
            $table->unsignedBigInteger('ref_id');
            $table->timestamps();

            $table->index(['ref_table', 'ref_id']);
        });
    }

    public function down()
    {
        Schema::dropIfExists('multipleuploads');
    }
};
```

- **MultipleUploadModels**

The screenshot shows the same Visual Studio Code editor with the file 'MultipleUpload.php' selected in the Explorer panel. The main editor displays the content of this file, which is a Laravel model. The code includes the following:

```
<?php
namespace App\Models;

use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Database\Eloquent\Model;

class MultipleUpload extends Model
{
    use HasFactory;

    protected $table = 'multipleuploads';

        'filename',
        'original_name',
        'ref_table',
        'ref_id',
        'created_at',
        'updated_at'
    ];

    // Relationship ke Pelanggan
